

FIRE FIGHTING AND WATER REPLACEMENT

During bush fire emergencies firefighters may need to draw water from private properties as they work to protect life and property by suppressing the fire.

Under certain circumstances such as during a prolonged drought, this water may be replaced by the NSW RFS after consultation with the Department of Primary Industries, as the Agriculture and Animal Services Functional Area (AASFA) under the NSW Government's Disaster Assistance Scheme.

Water replacement may be provided during or after a bush fire emergency to livestock owners, crop and produce growers who meet the eligibility criteria below:

- water was taken to suppress a fire or land owners experienced an infrastructure failure as a result of a bush fire; and
- the water taken significantly impacts the land owner's ability to ensure sufficient water for livestock and agricultural purposes (eg. vineyards, horticulture).

Hobby farmers who don't earn a significant portion of their income from agricultural enterprise will be assessed on a case by case basis.

Affected landowners should contact the NSW Department of Primary Industries or Local Lands Services in their region for further advice.

The assessment will consider:

- Verifying that water was taken for fire fighting purposes
- Verifying the amount of water taken
- Consider the availability of alternate water sources, as well as other factors such as recent or forecast rainfall
- In some instances, minor repairs to damaged infrastructure may also be arranged to enable water supply

Following approval water may be replaced in stages to assist in maintaining the welfare of livestock/animals and continue production, but will not exceed the total amount of water taken by fire fighting authorities.
